

ANDERSON
INTERNATIONAL CORP

**Anderson
Solvex-Series-
Expander™**

**10" Diameter Model
Nominal Capacity 800 MTPD**

Advantages:.....

The Anderson Solvex-Series-Expanders™ are designed to operate in conjunction with oilseed preparatory systems ahead of solvent extraction.

The Expanders cook the proteins and starches, shears the oil cells, and expands the oil bearing material producing a strong, porous collet.

- Versatility - The Solvex™ Expander will process low oil bearing seeds and prepress cakes from high oil bearing seeds.
- Low operating costs - the Solvex™ Expander takes advantage of the highly efficient conversion of electrical energy to mechanical work.
- Low maintenance costs - Anderson's 40 years of Expander design and metallurgy experience assures months of wear life on worm flights and liners. This provides for long term continuous operation.

Applications:.....

- Expander preparation of low oil content seeds and prepress-cakes ahead of solvent extraction.
